

Is Europe's workforce ready for AI?

What 1,000+ people across 13 countries told us about education, jobs, and the AI skills gap.

Download here:

Our Transnational research report 
www.ai4vet4ai.eu/public-deliverables/

We asked **more than 1,000** people. Read over **11,000** studies. Looked at **5 industry sectors** across **13 countries.**

We found out that...

65% of organisations say **AI-related skills** are missing from **VET graduates**.

Vocational education and training (VET) systems are struggling to keep up with the pace of change.

AI Goes Beyond Tech Jobs

It's transforming:

- Healthcare
- Retail
- Education
- Tourism
- And many more sectors!

Over **88 million jobs** across these sectors are being impacted.

Teachers Need Support Too

Teachers feel unprepared to teach or use AI. Without **teacher training**, AI won't reach the classroom.

We need urgent upskilling for educators.

It's Not Just Tech - It's Ethics

Soft skills still matter.

- Understanding how AI makes decisions
- Working alongside AI
- Communicating clearly & ethically

VET must teach responsible, human-centered AI use.

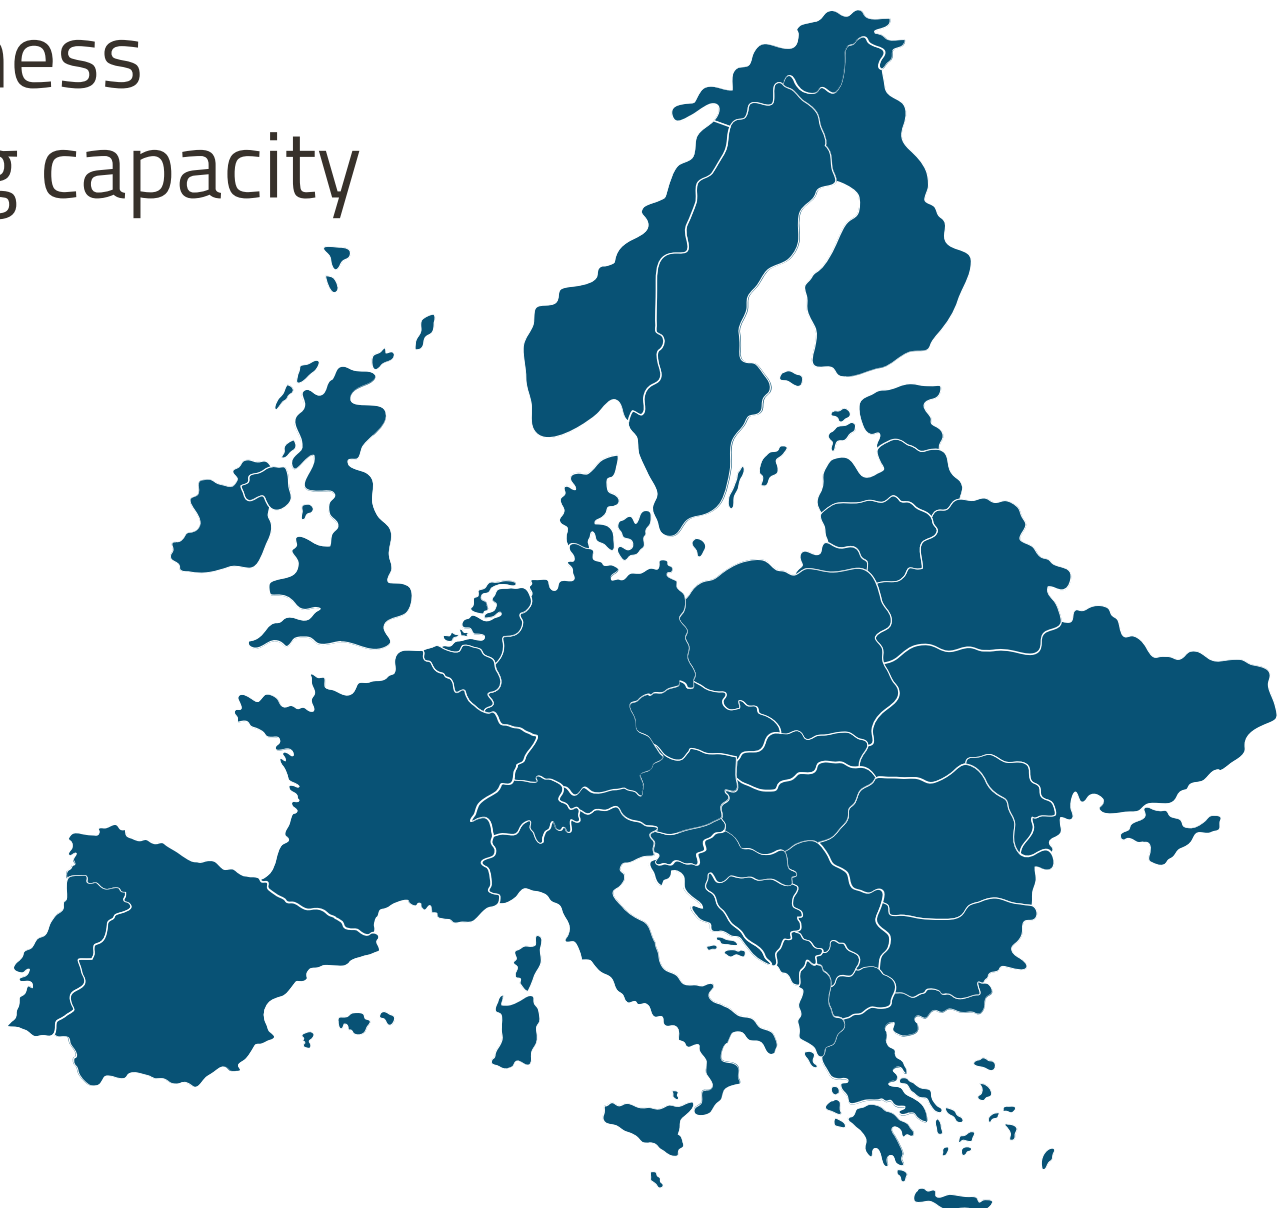

Big Differences Across Regions

There's no one-size-fits-all solution.

Regions in Europe vary widely in:

- AI readiness
- Awareness
- Training capacity

**Solutions
must be
local,
flexible,
inclusive.**
